                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      40
                                                                                                                                                                                                                                                                                                                                                                                                                                       This is the nucleotide sequence of the open reading frame of a novel human protein comprising a secretory signal (AAV29035), isolated from stomach cancer cells. Its proteins can be used as nutritional sources or supplements. The proteins may also have cytokine functions, immune modulating functions, haematopoiesis regulating activity, activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, receptor/ligand activity, anti-inflammatory activity, tumour inhibition activity.

The present invention describes colon tumour associated proteins (I) and the present invention describes colon tumour associated protein. (I) and (II) and (II) and be used in gene therapy and vaccine production. (I) and (II) may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate colon tumour associated protein (TCAP) carpersaion, such as colonic cancer. For example, (II) may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the cused to treat disorders associated with decreased expression by activity of TCAPs by expressing inactive proteins or to supplement the patients own production of them. Additionally, (II) may be used to patients own production of them. Additionally, (II) may be used to conflict the TCAP proteins, by inserting the nucleic acids into a host complementary sequences may also be used as DNA probes in diagnostic complementary sequences may also be used as DNA probes in diagnostic complementary sequences may also be used as antigens in the production of antibodies against TCAPs and in assays to identify modulators of TCAP expression and activity. The and in a seape to identify modulators of TCAP expression and activity. The and in the presence of TCAPs in samples, and in assays to identify modulators of TCAP expression and activity. The and activity. The anti-(I) antibodies and anti-(I) antibodies may also be used as diagnostic and antadomism and activity. The and activity of and activity. The and activity of and activity are and anti-(II) antibodies and anti-(II) antibodies may also be used to down regulate (e.g. by enzyme linked immunosorbant assays (ELISA)). AAI28460 to AAI29512 and AAMX4494 to AAMX4523 represent invention.

Given in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                80
                                                                                                                                                                                        The present sequence encodes a human TSA7005 protein which shares 32% homology with human and mouse Reg proteins, and 34% homology with the rat Reg protein. TSA7005 has pancreatic beta cell growth activity and hypoglycaemic activity. The TSA7005 protein can be used for the diagnosis and treatment of diseases associated with the gene and its expression product.

                                                                                                                                                                                                                                                                                                                                                The present invention describes compounds (I) for the immunotherapy and diagnosis of colon cancer. Also described: (1) a method for detecting the presence of cancer in a patient; (2) a method for stimulating and/or expanding T cells specific for a tumour protein; (3) an isolated T cell population comprising T cells prepared by the method of (2); (4) a method for stimulating an immune response in a patient; (5) a method for treating cancer in a patient; and (6) a method for inhibiting the development of cancer in a patient. (I) have immunostimulant and cytostatic activities and can be used in vaccines. AB232646 to AB233725 and ABP55343 to ABP55391 represent human colon cancer/tumour related
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               240

The method is useful for detecting the presence of a tumour. Kits comprising an antibody specific for RELP and reagents for detecting the antibody, or a nucleic acid complementary to a portion of a nucleic acid encoding RELP, are useful for identifying the presence of cancer, characterise the cancer, or monitor the course of treatment of cancer. The present sequence is human RELP cDNA used to illustrate the method of the invention. Human RELP gene is located at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Detecting the presence of a tumor comprises detecting the concentration of a Reg Like Protein or the presence or quantity of a nucleic acid encoding it -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    420
                                                                                                                                                                                                                         The present sequence encodes a new isolated REG-like protein (RELP) human immunoglobulin (Ig) derived protein. RELP comprises: (a) a human variable and constant region; or (b) an isolated human Ig derived protein or specified portion or variant encoded by a nucleic acid. RELP has cytostatic activity and can be used as an Ig agonist and in protein therapy. The RELP human Ig derived protein or a specified portion or variant can be used for preventing or treating a RELP protein mediated condition, malignant condition of disease condition, e.g. cancer. The nucleic acids can be used in producing RELP Ig derived protein. The human RELP protein of the present invention is located to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence encodes a human Reg I-gamma protein, which comprises a C-type lectin. The sequence was identified in Incyte clone 1310334. Reg I-gamma protein is involved in regulation of call growth and development. Since the overexpression of reg proteins is associated with tumourogenesis and neurodegeneration, inhibition of human Reg I-gamma expression can be used for treading or preventing neoplasia or metastasis and neurodegenerative changes associated with Alzheimer's disease and other disorders of the central nervous system, e.g. Down's syndrome. Reg I-gamma can also be used in therapeutics to induce regeneration of pancreatic beta-cells in the treatment of disabetes. The products can also be used for detection for, e.g. expression of REG

The present invention describes colon tumour associated proteins (I) and the polynucleotides (II) that encode them. (I) have cytostatic activity. (I) and (II) can be used in gene therapy and vaccine production. (I) and (II) may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate colon tumour associated protein (TCAP) expression, such as colonic cancer. For example, (I) and (II) may be used to treat disorders associated with decreased expression by
                                                                            JA;
                                                                                                                                                                                                                                                                         Colon tumor associated proteins and nucleic acids useful for prevention, diagnosis and treatment of colonic cancer -

rectifying mutations or deletions in a patient's genome that affect the activity of TCAPs by expressing inactive proteins or to supplement the patients own production of them. Additionally, (II) may be used to produce the TCAP proteins, by inserting the nucleic acids into a host call culturing the cell to express the protein. (II) and its complementary sequences may also be used as DNA probes in diagnostic polymerase chain reaction (FCR) and hybridisation assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be in need of restorative therapy. (I) may also be used as antigons in the production of antibodies against TCAPs and in assays to identify modulators of TCAP expression and activity. Anti-(I) antibodies and antagonists may also be used to down regulate TCAP expression and activity. The anti-(I) antibodies may also be used as diagnostic agents for detecting the presence of TCAPs in samples. (G.g. by enzyme linked immunosorbant assay (ELISA)). AAI28460 to AAI29512 and AAVA14944 to AAVA1523 represent nucleotide and amino acid sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 given in the exemplification of the present invention

```
The present invention describes compounds (I) for the immunotherapy and diagnosis of colon cancer. Also described: (1) a method for detecting the presence of cancer in a patient; (2) a method for stimulating and/or expanding T cells specific for a tumour protesh; (3) an isolated T cell population comprising T cells prepared by the method of (2); (4) a method for stimulating an immune response in a patient; (5) a method for treating cancer in a patient; and (6) a method for inhibiting the development of cancer in a patient. (1) have immunostimulant and cytostatic activities and can be used in vaccines ABZ12646 to ABZ13725 and ABP55143 represent human colon cancer/tumour related sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         316 TACGGAAACGGAGCCCACCTGGCATCTATCCTGAGTTTAAAGGAAGCCAGCACATAGCA 375

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         80
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                9
                                                                                            A cDNA clone (AAT51784) codes for a colon specific protein (AAW12691) that may be useful as a diagnostic marker for colon cancer. It is believed that the presence of active transcription of the colon specific gene in non-colon cells of a host is indicative of colon cancer metasteses. The cDNA, deposited as ATCC 97129, was isolated from a human colon cancer cDNA library. It can be used to design diagnostic probes, to produce recombinant colon specific protein in transformed host cells, in the gene therapy of patients having need of a colon specific gene protein, or to design antisense constructs useful for treatment of colon cancer.

```
The present sequence represents a human colon specific gene. The nucleic acid sequence can be used to develop products for the diagnosis of a disorder of the colon, e.g. colon cancer or metastases. The products can also be used to screen for agonists or antagonists for the polypeptides. The antagonists may be used to treat colon cancer, since they interact with the function of colon specific polypeptides to inhibit functions which are necessary for the viability of colon cancer cells. The products can also be used for the production of antibodies and for the identification of receptors for the

The protein is 152 amino acids in length and exhibits cytostatic activity. The present sequence represents cDNA encoding the colon specific protein. The protein can be used in the diagnosis and treatment of colon cancer, and it is thought that abnormally high levels of the gene expression in non-colon cells is an indication of colon cancer metastasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel human colon specific polypeptides and polynucleotides for diagnosis and treatment of colon cancer, for screening compounds which interact with polypeptide, for synthesis of DNA and manufacture of DNA

The present invention describes colon tumour associated proteins (I) and the present invention describes colon tumour associated protein. (I) and (II) and (II) tan be used in gene therapy and vaccine production. (I) and (II) may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate colon tumour associated protein (TCAP) expression, such as Colonic cancer. For example, (I) and (II) may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the cativity of TCAPs by expressing inactive proteins or complement the patients own production of them. Additionally, (II) may be used to produce the TCAP proteins, by inserting the nucleic acids into a host complementary sequences may also be used as DNA probes in diagnostic polymerase chain reaction (PCR) and hybridisation assays to detect and character the presence of similar nucleic acids is samples, and the preduction and the production of antibodies against TCAPs also be used as antigens in the production of antibodies against TCAPs and in assays to identify modulators of TCAP expression and activity. The anti-(I) antibodies may also be used to as a diagnostic agents for detecting the presence of TCAPs in samples.

TCAP expression and activity. The anti-(I) antibodies may also be used to as diagnostic agents for detecting the presence of TCAPs in samples conditions against TCAPs and AAM24494 to AAM24523 represent nucleotide and amino acid sequences given in the exemplification of the present invention.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                               1 MASRSMRLLLLLSCLAKTGV.....LTWSSNECNKRQHFLCKYRP 158
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 1
